Congenital Heart Disease Network South Wales and South West

Education and Training Strategy

Introduction

The Congenital Heart Disease (CHD) Network South Wales and South West was formed in April 2016 to support the provision of high quality care for CHD patients across South Wales and the South West. Its vision is to be a Network whereby:

- Patients have equitable access to services regardless of geography
- Care is provided seamlessly across the Network and its various stages of transition (between locations, services and where there are co-morbidities)
- High quality care is delivered and participating centres meet national standards of CHD care
- The provision of high quality information for patients, families, staff and commissioners is supported
- There is a strong and collective voice for Network stakeholders
- There is a strong culture of collaboration and action to continually improve services

The CHD standards state:

'Each Specialist CHD Surgical Centre must demonstrate a commitment to the training and education of both core and subspecialty level training in and paediatric and ACHD cardiology, paediatric and ACHD surgery and congenital heart disease in pregnancy, according to the latest Joint Royal Colleges of Physicians' Training Board curriculum.
